

Orebit

The future of
Manganese trading
powered by Blockchain

PROBLEMS

High upfront capital required

Buying a mine and heavy machinery demands a significant initial investment.

Illiquid assets

Ore mines and equipment are difficult to buy or sell, making them hard to convert into cash quickly.

Specialized knowledge needed

Mining and selling ores involve complex regulations and require technical expertise to ensure profitability.

SOLUTIONS

Select your mine

A collection of mines operating ready to return your investment.

No strings attached

Need the money? Just unstake and sell your tokens.

Team ready

A good quality team handling all the operational for you.

Orebit

Stake your tokens and receive Manganese proportional to the total staked. Then, decide to sell the ore whenever you want!

*This is a development-stage prototype intended to demonstrate the founders' vision. The final version is subject to further refinement and may change.

Mining as a Service

Orebit came from an idea to tokenize a Manganese Mine located in Marabá, Brazil. But why settle with a single mine when we can tokenize a whole Manganese extraction operation?

TIMING

Perfect timing

Backed by our fully owned Eagle mine, now operational, we're entering a pivotal phase where early investor support can validate and accelerate a scalable Web3 mining model.

Growth opportunity

Our presence in a region rich with operational manganese mines positions us to grow organically and, over time, consolidate key assets through targeted acquisitions.

TARGET AUDIENCE

High profile investors

Ore has demonstrated steady performance across cycles, making it an attractive addition to any diversified portfolio — especially for qualified investors.

Retail investors

This is a solution designed to be accessible to investors of all sizes, unlocking a traditionally restrictive market and bringing new liquidity through tokenization.

Market Potential

Manganese Market

Manganese Ore in Brazil

The Brazilian manganese ore market, known for its high quality, is a significant player in the global market, with exports reaching \$84.9 millions in 2024.

The global manganese market was valued at \$24.4 billions in 2023 and is projected to grow to USD \$37.9 billions by 2032.

Recent geological studies estimate over 3 million tons of high-quality manganese ore across our currently operating sites.

In addition to the estimated resources, the study suggested that the broader 3,000-hectare Eagle site may hold an exploration target of up to 10 million tons of manganese ore.

Key differentiators

LOCATION

The region has a logistic structure: Carajás railway, hydroelectric plants, transmission lines, highways, airports, urban centers.

GROWTH POTENTIAL

We'll reinvest production revenue to acquire and operate new mines, scaling our ecosystem with proven know-how.

UNTAPPED MARKET

Unique opportunity to stand out as a first-mover and a compelling diversification play for institutions seeking real-world exposure beyond traditional asset classes.

PRODUCT READY

Orebit has a live, producing asset, making our token-backed model ready for real-world validation and revenue generation.

Business Model

Project Legal Structure

Buyers negotiate and enter into contracts directly with each mine SPV.

Orebit is a Holding Company, located in a crypto-friendly country, that owns all the SPVs.

Each mine operates through its own SPV registered in their country. Profits are distributed to Orebit through compliant, tax-efficient structures in accordance with international standards.

Orebit's treasury converts profits received from each mine SPV into cryptocurrency (USDC) and proportionally distributes them to \$ORE stakers within the corresponding mine pool.

Next steps

HORIZONTAL GROWTH

Acquiring new mines within our region and creating newer mine pools.

VERTICAL GROWTH

Manganese refinery, allowing us to increase margins and offer token holders a new utility.

Potential Scenarios

WORST CASE

The project fails to acquire new mines and only operates Eagle. It's still a solid investment, forecasting \$5.6M profit* at current maximum extraction permit yearly.

REALISTIC SUCCESS

The project is a success. \$ORE is successfully launched and crypto native investors have an easy access to the sector. The profits generated from mining pools are enough for a sustainable horizontal growth.

BEST CASE

The project success positions Orebit as one of the strongest players in Brazil's manganese ore extraction market. This growth opens the door to the creation of our own manganese refinery to boost value capture and supply chain control.

The Ask

We are looking for financing to kickoff sustainable maximum extraction output on Eagle operations and accelerate our product development.

Use of Funds

SHORT TERM GOALS

- Open the Orebit entity in a crypto-friendly country and transfer ownership from Eagle's SPV to it.
- Improve our brand and work on social media to slowly build a community
- Develop smart-contracts for Staking platform and website.
- Reach our 5,000 tons manganese ore extracted cap per month.
- Sell and export our first batch, distributing first profits to token holders by the end of year.
- Increase our permit's limit by the end of year.
